SwarmBridge

Create Event

- Go to rrdev.brycelongacre.com/rrSwarm/ and create a new event

Enter Settings

- Event ID should match your event ID in RACE RESULT 12
- The name is used as reference and is recommended to match RR12 as well
- Times API - The url for times/addnew in your event file. Offline or online. Make sure to use the correct URL.
- Start Date/Time – This is used as a filter to start looking for received messages after this data and time when SwarmBridge is enabled.

Assign Swarm Devices to Timing Points

- Assign each device from your account to the proper Timing Point
- Timing Points should match RR12 exactly
- File ID is optional but can be entered to filter data to only that ID number
- Decoder ID is optional and only used as reference text

Using SwarmBridge

- First enter your account number and the desired event ID
- Press Get Settings to load the appropriate settings for your event
- Once settings are loaded you can press Open Connection to start SwarmBridge looking for unacknowledged messages to read and send to RR12
